

DECLARATION OF COMPLIANCE

We hereby declare that the product(s) described below

REFERENCE	DESCRIPTION	MATERIAL
SBP-8106-010	BUCKET – 10.8L	PP

Comply with the European Union Commission legislation listed below:

- Regulation EC No. 1935/2004 on materials and articles intended to come into contact with food
- Regulation EU No. 10/2011: “Plastic materials and articles intended to come into contact with food”
- Regulation 2023/2006 on rules of Good Manufacturing Practice
- Directive 94/62 on packaging and packaging waste

– together the “Applicable EU Legislation”

The compliance is verified by Overall migration testing at an external accredited laboratory under the following conditions:

Simulants	Test conditions
3 % acetic acid	10 days at 40°C
50% ethanol	10 days at 40°C
Olive oil	10 days at 40°C

The overall migration testing is performed according to method EN1186.

For substances with SML (specific migration limits) values, these are verified by specific migration testing. Test conditions dependent on actual substance. Specific migration testing is performed according to EN13130.

If information on dual use substances, OML or SML values or volume/surface ratio in the individual products is required please contact us.

Product suitability:

The products are suitable for all food types and for any long term storage at room temperature or below, including hot-fill conditions and/or heating/ microwaving up to $70\text{ }^{\circ}\text{C} \leq T \leq 100\text{ }^{\circ}\text{C}$ for maximum $t = 120/2^{((T-70)/10)}$ minutes. Following this equation: at $T = 70\text{ }^{\circ}\text{C}$ time of contact is 2 hours, at $T = 80\text{ }^{\circ}\text{C}$ is 1 hour, at $T = 90\text{ }^{\circ}\text{C}$ is 30 minutes.

Polypropylene used for production of our goods is suitable for heat treatment, but plastic packaging made of polypropylene in general become flexible when subjected to hot temperatures. Care must be taken in relation to stacking immediately after hot filling or microwaving.

REACH:

These products are produced from virgin polypropylene polymers, clear or with addition of masterbatches, IML's, other labels and inks supplied to us by our suppliers.

As downstream users of these articles, it is our supplier's responsibility that these articles meet the requirements of the so-called REACH legislation (Registration, Evaluation, Authorization, and restriction of Chemicals, 1907/2006 EC with all amendments).

Based on confirmations received from their suppliers, the company hereby confirms that:

- all substances covered by REACH Regulation and used in materials supplied to our supplier has been registered
- no substances listed in the ECHA candidate list of Substances of Very High Concern (SVHC) for authorization updated on the 8 July 2021 are present above 0,1 % by weight in our products.

Use of colourants in plastic materials in contact with food :

We hereby confirm that according to the information provided by our suppliers, all colourants used in the production process comply with Resolution AP (89) 1.

Nanotechnology:

We hereby confirm that products produced at any factory within our supplier are produced without the use of nanoparticles and with no use of nanotechnology.

Materials of animal origin - BSE/TSE :

Our supplier hereby informs that, according to information provided by their suppliers, raw materials used can be synthesized from animal by-products, i.e. hydrolysis etc. of animal fats and oils into fatty acids.

However, the manufacturing process of tallow derivatives includes a multistep chemical treatment involving high temperatures and long residence times. Therefore, it fulfills requirements laid down in Regulations 1069/2009/EC, 142/2011/EC, and the "Note for Guidance EMEA/410/01, rev. 3".

Convention on International Trade in Endangered Species of Wild Fauna and Flora

According to the information provided by our suppliers, raw materials used to manufacture the products do not contain any substances derived from any endangered species of fauna and flora.

Bisphenol A, B, F and S:

Bisphenol A (BPA), Bisphenol B (BPB), Bisphenol F (BPF) and Bisphenol S (BPS) is not intentionally used in the products.

Phthalates:

Our supplier has never intentionally used phthalates in the production of plastic packaging.

Some resin suppliers are using some phthalates in the catalyst system during their production and this may result in traces in the product.

Our supplier meets the requirements of EU 10/2011 and any subsequent amendments thereto. Consequently, we are working in collaboration with our suppliers to ensure that any possible trace of phthalates in the product do not exceed the limits stated in 10/2011.

Gluten:

Our supplier is not using gluten in our production of plastic packaging. We have evaluated the risk of gluten in the products. The conclusion is that the risk is negligible. None of the raw materials contains gluten and they do not allow eating (or drinking) in their production or warehouses.

Mineral Oil :

Our supplier confirms that mineral oil saturated hydrocarbons (MOSH) and mineral oil aromatic hydrocarbons (MOAH) may be present in the final product. However, concentrations are below the limit value suggested in the latest draft of German mineral oil ordinance from March 15th 2017.

Nonylphenols :

Our supplier has never intentionally used nonylphenols in the production of plastic packaging.

They meet the requirements of EU 10/2011 and any subsequent amendments thereto. Consequently, the company is only using monomers and additives listed in EU 10/2011.

Chlorine:

Generally, the printing ink industry uses low levels of chlorinated organic compounds in the production of printing ink in some colors. The chlorine is part of the synthesis route of the pigments and the chlorine ensures the required coloristic and fastness properties of the inks.

Our supplier is in continuous dialog with their suppliers of printing ink to reduce the levels of chlorine. Their ink suppliers do not use substances classified as critical, toxic or highly toxic by the EuPIA Exclusion List, nor do they use chlorinated compounds banned from use under the REACH Regulation (EC) No 1907/2006, Title VIII/Annex XVII. The company meets the requirements of EU 10/2011 and any subsequent amendments thereto. Consequently, they are on a continuous basis, in collaboration with their supplier's document that any possible trace of chlorine in their product does not migrate above the limits stated in 10/2011.

Primary aromatic amines:

Migration of primary aromatic amines is primarily an issue for polyamide food contact materials.

Our supplier is using polypropylene (PP) for all products. Further EU10/2011 states that plastic materials and articles shall not release primary aromatic amines, excluding those appearing in Table 1 of Annex I, in a detectable quantity into food or food simulant. The detection limit is 0,01 mg of substance per kg of food or food simulant. The detection limit applies to the sum of primary aromatic. Food contact products produced by the company meet the requirements of EU10/2011.

Other chemicals:

The chemical materials listed below are not intentionally used in the manufacture or the formulation of the products and are not expected to be present as our supplier is primarily using polypropylene (PP) plastics, for all products, which is approved for food contact materials. However, the products have not been tested for these chemical materials:

- formaldehyde
- epoxidised soybean oil (ESBO)
- Melamine

Packaging and packaging waste:

Our supplier hereby warrants that their products comply with the European Union Committee Directive 94/62/CE with later amendments and that the company meets the national requirements set on basis of these. Consequently, they are working on:

- reducing our impact on the environment
- reducing the production of waste
- increasing use of re-cycled material where appropriate

Further as part of complying with the Directive the content of heavy metals (sum of lead, cadmium, mercury and hexavalent chromium) in our products is < 100 ppm.

The management of these requirements is integrated into our environmental management system based on the requirement of ISO14001 and the requirements of EN13430 – Requirements for packaging recoverable by material recycling and EN 13428 – Prevention by source reduction.

Printing inks:

The printing inks used by our supplier are all in compliance with:

- Swiss Ordinance of the FDHA on Materials and Articles (817.023.21)
- EuPIA Guideline on Printing Ink applied to the non-food contact surface packaging materials and articles. The products are produced without the following substances:
 - Benzophenon
 - 4-Hydroxybenzophenon
 - 4-Methylbenzophenon
 - 2,2'-Dimethoxy-2-phenylacetophenon
 - 1-hydroxy-cyclohexyl phenyl ketone
 - 2,4-diethyl thioanthone (DETX)
 - 2-methyl-4'-(methylthio)-2-morpholinpropiofenone
 - Ethyl-4-dimethylaminobenzoate
 - Methyl-2-benzoylbenzoate

In accordance with the Applicable EU legislation it is the responsibility of the customer to ensure that the product supplied by our supplier is suitable for the intended use and that the use is in accordance with the relevant acts of law, statutory orders and other rules and regulations, including the said Directives.

The company warrants full traceability of the products delivered throughout the manufacturing process. The factories are as a minimum certified according to ISO 9001:2015 and BRC Packaging Material
